

Don't Risk It, Sanitize It!

Contaminated Small Wares (including utensils and equipment) are the **third most common cause of foodborne illness.**¹

Sani Professional® No-Rinse Sanitizing Multi-Surface Wipes are **the fast, easy, and effective way to sanitize hard, non-porous food contact surfaces.**

PERFECT FOR SMALL WARES

- ✓ Wipes effectively clean and sanitize hard to reach areas of small wares and equipment
- ✓ Single-use wipes reduce the risk of cross-contamination

- ✗ Use of rags makes it difficult to clean hard to reach areas of small wares and equipment, and may leave them unsanitized
- ✗ Rags are used from surface to surface and may cause cross-contamination

COMPLIANCE

- ✓ Each Sani Professional wipe consistently releases the right level of quat to kill 99.999% of common foodborne pathogen within 60 seconds
- ✓ Pre-moistened wipes eliminate chemical spills and splashes, especially around food
- ✓ Food Code Compliant, EPA Registered in all 50 states, NSF Listed

- ✗ Risk of human error when mixing and measuring chemicals
- ✗ Use of rag and bucket could lead to spills or splashes on food
- ✗ Chemical solution, when not recharged as needed, may render the sanitizer ineffective. Presence of debris in the solution or on the rag may also reduce sanitizing efficacy
- ✗ Some chemicals are not registered in all 50 states by the manufacturer

CONVENIENCE

- ✓ Ready to use; no mixing or measuring of chemicals. Wipe, Toss, Done!TM
- ✓ Easy to use; little to no training required

- ✗ Solution must be prepared according to manufacturer's directions, have concentration tested regularly, and recharged throughout the shift
- ✗ Training required; may be difficult to deploy when staff turnover rate is high

^{*}Always check with the manufacturer of small wares and equipment for cleaning/sanitizing product chemical compatibility.
